1 InfraSensing Sensors Compatibility

1.1 Connectivity to InfraSensing Base Unit using Modbus TCP

This document describes the Modbus information which includes implementation basics, supported types, frame format, function code and similar subjects.

1.2 How to use this manual

This information is organized based on the module that you connect to the Base Unit.

Every Base Unit has a built-in Temperature probe, Modbus point for Node 0 will always be the Internal Temperature of the Gateway either for Wired or Wireless.

Starting Firmware 7.41, it includes the Internal Ping. So, Node 1 will always be for the Internal Ping.

Node 41, 42, 43 and 44 is dedicated to Fault sensors.

All offered units are Modular, so this Reference guide will provide all Modbus list depending on the modules and combination of sensors that a customer will connect.

1.3 Base Unit Compatibility

The Modbus TCP capability is available on **Firmware Version 6.21** and higher.

2 Getting Started

2.1 Connectivity to InfraSensing Base Unit using Modbus TCP

Modbus TCP is an open standard protocol that uses regular Ethernet cables and switches to communicate with each other. It provides data acquisition and control, through query and response within the IP network.

Default Modbus Port – 502

With the firmware 9.2 and above, Base Unit Modbus TCP can now be polled by 4 Modbus masters.

2.2 Connectivity to InfraSensing Base Unit using Modbus TCP

Modbus TCP is disabled by default.

We invite you to watch the unboxing video before unpacking, installing and configuring your InfraSensing sensors: <https://serverscheck.infrasensing.com/sensors/how-it-works.asp>

Once you set up the web interface, you should see the Modbus Tab under the Settings option. (For Firmware 8.0 and above).

The screenshot shows the 'Settings & Info' page of the web interface. It is divided into several sections:

- Device information:** Account name (admin), Current System Date (01 Jan 2019), Current System Time (20:47:21), Hardware Version (Release 5.1), Firmware Version (Release 8.00 (Feb 12 2019)), Mac Address (00:03:64:03:6A:A4), IP Address (192.168.11.110), and Node Status (6/8/44).
- Industrial & external communications:** Includes toggles for SNMP (checked), Modbus (unchecked and highlighted with a black box), Cloud (unchecked), Email (unchecked), and SMS (unchecked).
- General settings:** Device Name (SensorGateway).

Buttons for 'Change Password', 'Update Time', 'Upgrade Firmware', 'Change IP', and 'Calibrate Sensors' are visible next to their respective fields.

Enable Modbus Server, set up the Server Port (Default is 502) and set Modbus ID (default is 1).

Modbus Settings

The 'Modbus Settings' page contains the following configuration options:

- Enable Modbus Server:** A green toggle switch is turned on.
- Server Port:** A text input field containing the value '502'.
- Modbus ID:** A text input field containing the value '1'.
- Buttons:** An orange 'Update' button and a white 'Reset' button are located at the bottom left.

2.3 Optional Modbus RTU

The Modbus RTU enables integration of RS-485 industrial control systems, which expands our solutions compatibility further.

The Add-On connects like a typical sensor to any of the external sensor ports of our Base Unit (BASE-XX) or our Expansion hubs (EXP-8HUB/EXP-4HUB) and then your controller is connected to the RTU Add-On via RS-485

Below is an image of the wiring diagram for us to connect our control

Just match the connection from your RS-485 going to our Modbus RTU Add-On

2.4 Enabling your Modbus RTU

We would first need to be in firmware 8.6 or above for the Modbus RTU add-on to work, then once we access the settings page on our Base Unit we would see an additional option called Modbus Slave Add-On

Settings & Info

Device information

Account name	admin
	Change Password
Current System Date	01 Jan 2019
Current System Time	00:00:35
	Update Time
Hardware Version	Release 5.1
Firmware Version	Release 8.7 (Jan 21 2021)
	Upgrade Firmware
Mac Address	00:03:64:03:27:26
IP Address	192.168.11.14
	Change IP
Node Status (online/used/max)	2/9/51
	Calibrate Sensors
	Modbus Slave Add-On

Industrial & external communications

SNMP	<input checked="" type="checkbox"/>	InfraSensing Cloud	<input type="checkbox"/>	Email	<input type="checkbox"/>
Modbus	<input type="checkbox"/>			Cloud SMS	<input type="checkbox"/>

After clicking on the link, you would then see the page as seen on the image below

ADDON-RTU Config

Slave ID	<input type="text" value="1"/>
Baud Rate	<input type="text" value="9600"/>
Stop Bits	<input type="text" value="1"/>
Parity	<input type="text" value="Even"/>

[Update](#) [Reset](#)

Set the Parameters for your Modbus RTU connection

- Slave ID** – Identification of your device
- Baud Rate** – Multiple options for Baud rate with default 9600
- Stop Bits** – 1 or 2
- Parity** – Odd or Even

The Industrial controller should have the same set up as your Modbus RTU so they can establish connection.

3 Supported Registers

Coils (Discrete Outputs) - 00001 to 09999 (Read/Write)
 Input Status - 10001 to 19999 (Read)
 Input Registers - 30001 to 39999 (Read)
 Holding Registers - 40001 to 49999 (Read/Write)

4 Function Codes Supported

Code	Function	Description
01	Read Coils	Read from 1 to 2000 contiguous status of coils managed by the server. Coils in the response message are packed as one per bit of a byte, 1=On and 0=Off. If the requested quantity of coils is not a multiple of 8, zeros are padded in the final byte.
02	Read Input Status	Read from 1 to 2000 contiguous input status managed by the server. Discrete inputs in the response message are packed as one per bit of a byte, 1=On and 0=Off. If the requested number of inputs is not a multiple of 8, zeros are padded in the final byte.
03	Read Holding Registers	Read the contents of the continuous block of 1 to 127 holding registers. Data are packed as two bytes per register; the first byte contains the high order bits.
04	Read Input Registers	Read the contents of contiguous block of 1 to 127 Input registers. Data are packed as two bytes per register; the first byte contains the high order bits.
16	Set Multiple Registers	Write values into a block of contiguous registers (1 to 120).

5 Error Codes Supported

Exception Code	Name	Meaning
1 (01 hex)	Illegal Function	<p>The function code received in the query is not an allowable action for the slave. This may be because the function code is only applicable to newer devices, and was not implemented in the unit selected.</p> <p>It could also indicate that the slave is in the wrong state to process a request of this type, for example because it is unconfigured and is being asked to return register values. If a Poll Program Complete command was issued, this code indicates that no program function preceded it.</p>
2 (02 hex)	Illegal Data Address	<p>The data address received in the query is not an allowable address for the slave. More specifically, the combination of reference number and transfer length is invalid.</p> <p>For a controller with 100 registers, a request with offset 96 and length 4 would succeed, a request with offset 96 and length 5 will generate exception 02.</p>
3 (03 hex)	Illegal Data Value	<p>A value contained in the query data field is not an allowable value for the slave. This indicates a fault in the structure of the remainder of a complex request, such as that the implied length is incorrect. It specifically does NOT mean that a data item submitted for storage in a register has a value outside the expectation of the application program, since the MODBUS protocol is unaware of the significance of any particular value of any particular register.</p>
4 (04 hex)	Slave Device Failure	<p>An unrecoverable error occurred while the slave was attempting to perform the requested action.</p>
5 (05 hex)	Acknowledge	<p>Specialized use in conjunction with programming commands. The slave has accepted the request and is processing it, but a long duration of time will be required to do so. This response is returned to prevent a timeout error from occurring in the master. The master can next issue a Poll Program Complete message to determine if processing is completed.</p>
6 (06 hex)	Slave Device Busy	<p>Specialized use in conjunction with programming commands. The slave is engaged in processing a long duration program command. The master should retransmit the message later when the slave is free.</p>

Exception Code	Name	Meaning
7 (07 hex)	Negative Acknowledge	The slave cannot perform the program function received in the query. This code is returned for an unsuccessful programming request using function code 13 or 14 decimal. The master should request diagnostic or error information from the slave.
8 (08 hex)	Memory Parity Error	Specialized use in conjunction with function codes 20 and 21 and reference type 6, to indicate that the extended file area failed to pass a consistency check. The slave attempted to read extended memory or record file, but detected a parity error in memory. The master can retry the request, but service may be required on the slave device.
10 (0A hex)	Gateway Path Unavailable	Specialized use in conjunction with gateways, indicates that the gateway was unable to allocate an internal communication path from the input port to the output port for processing the request. Usually means the gateway is misconfigured or overloaded.
11 (0B hex)	Gateway Target Device Failed to Respond	Specialized use in conjunction with gateways, indicates that no response was obtained from the target device. Usually means that the device is not present on the network.

6 Modbus Register List

Things to remember:

- The built-in Temperature Sensor of the Base Unit is always on Node 0.
- For Firmware 7.41 and above, Internal Ping is always on Node 1. Even if the Ping is disabled, it still picks the last value before you disabled it.
- Wired Temperature and Humidity Sensor Probe has 3 node values which appear as follows:
 - 1st node value - Temperature
 - 2nd node value - Humidity 3rd node value - Dewpoint
- Daisy Chain Temperature & Humidity has 2 node value which appears as follows:
 - 1st Node value - Temperature
 - 2nd Node value - Humidity
- Note that if Internal Ping is enabled, Node 0 is Internal Temperature, Node 1 is Internal Ping, Node 2 is Daisy Chain Temperature and Node 3 is Daisy Chain Humidity.
- Daisy Chain sensors are *only* detected in Modbus TCP, *not* in Modbus RTU.
- Node numbers follows as to what Sensor is plugged first on the Sensor Ports or what is shown first on the web interface.

If a particular sensor connected has an alarm on the Warning and Down Range, it will trigger the register either for Alarm Warning or Alarm Down respectively regardless of either the value is less than (<) or the value is greater than (>) than the threshold.

6.1 Sensor List

1- Temperature	22- CO	43- CH2O	64- R410A
2- Humidity	23- HF	44- HCL	65- R22
3- Airflow	24- Volt (AC/DC Power Sensor)	45- HCN	66- SF6
4- Shock	25- Amp (AC/DC Power Sensor)	46- H2S	67- Nox
5- Dust	26- Watt (AC/DC Power Sensor)	47- CH4	68- Fan Status

Length = 4, Unsigned	Node 40 Type			31482		Please see section 6.1 for the sensor list
Length = 4, Unsigned	Node 40 Connection			31483		0 - Gateway 1 - Sensor Hub
Length = 3, Unsigned	Node 40 in Alarm Down	11481				
Length = 3, Unsigned	Node 40 in Alarm Warning	11482				
Length = 8, Floating	Node 40 Threshold High Down				41480-41481	
Length = 8, Floating	Node 40 Threshold High Warning				41482-41483	
Length = 8, Floating	Node 40 Threshold Low Down				41484-41485	
Length = 8, Floating	Node 40 Threshold Low Warning				41486-41487	

6.3 List of Fault Sensor Nodes and Registers

Length and Type	Data Label	Status	Coils	Input Register	Holding Register	Notes:
Length = 4, Floating	Node 41 Value			31512-31513		
Length = 3, Unsigned	Node 41 State	11512				0 - Offline 1 - Online
Length = 4, Unsigned	Node 41 Type			31514		Please see section 6.1 for the sensor list
Length = 4, Unsigned	Node 41 Connection			31515		0 - Gateway 1 - Sensor Hub
Length = 3, Unsigned	Node 41 in Alarm Down	11513				
Length = 3, Unsigned	Node 41 in Alarm Warning	11514				
Length = 8, Floating	Node 41 Threshold High Down				41512-41513	
Length = 8, Floating	Node 41 Threshold High Warning				41514-41515	
Length = 8, Floating	Node 41 Threshold Low Down				41516-41517	
Length = 8, Floating	Node 41 Threshold Low Warning				41518-41519	

Length = 4, Floating	Node 42 Value			31544-31545		
Length = 3, Unsigned	Node 42 State	11544				0 - Offline 1 - Online
Length = 4, Unsigned	Node 42 Type			31546		Please see section 6.1 for the sensor list
Length = 4, Unsigned	Node 42 Connection			31547		0 - Gateway 1 - Sensor Hub
Length = 3, Unsigned	Node 42 in Alarm Down	11545				
Length = 3, Unsigned	Node 42 in Alarm Warning	11546				
Length = 8, Floating	Node 42 Threshold High Down				41544-41545	
Length = 8, Floating	Node 42 Threshold High Warning				41546-41547	
Length = 8, Floating	Node 42 Threshold Low Down				41548-41549	
Length = 8, Floating	Node 42 Threshold Low Warning				41550-41551	

Length and Type	Data Label	Status	Coils	Input Register	Holding Register	Notes:
Length = 4, Floating	Node 43 Value			31576-31577		
Length = 3, Unsigned	Node 43 State	11576				0 - Offline 1 - Online
Length = 4, Unsigned	Node 43 Type			31578		Please see section 6.1 for the sensor list
Length = 4, Unsigned	Node 43 Connection			31579		0 - Gateway 1 - Sensor Hub
Length = 3, Unsigned	Node 43 in Alarm Down	11577				
Length = 3, Unsigned	Node 43 in Alarm Warning	11578				
Length = 8, Floating	Node 43 Threshold High Down				41576-41577	
Length = 8, Floating	Node 43 Threshold High Warning				41578-41579	
Length = 8, Floating	Node 43 Threshold Low Down				41580-41581	
Length = 8, Floating	Node 43 Threshold Low Warning				41582-41583	

Length = 4, Floating	Node 44 Value			31608-31609		
Length = 3, Unsigned	Node 44 State	11608				0 - Offline 1 - Online
Length = 4, Unsigned	Node 44 Type			31610		Please see section 6.1 for the sensor list
Length = 4, Unsigned	Node 44 Connection			31611		0 - Gateway 1 - Sensor Hub
Length = 3, Unsigned	Node 44 in Alarm Down	11609				
Length = 3, Unsigned	Node 44 in Alarm Warning	11610				
Length = 8, Floating	Node 44 Threshold High Down				41608-41609	
Length = 8, Floating	Node 44 Threshold High Warning				41610-41611	
Length = 8, Floating	Node 44 Threshold Low Down				41612-41613	
Length = 8, Floating	Node 44 Threshold Low Warning				41614-41615	

6.4 List of Daisy Chain Nodes and Registers

Note: This is ONLY applicable in Modbus TCP. Daisy chain sensors are NOT detected when connected to Modbus RTU.

Length and Type	Data Label	Status	Coils	Input Register	Holding Register	Notes:
Length = 4, Floating	Node 1 Value			35200-35201		
Length = 3, Unsigned	Node 1 State	15200				0 - Offline 1 - Online
Length = 4, Unsigned	Node 1 Type			35202		Please see section 6.1 for the sensor list
Length = 4, Unsigned	Node 1 Connection			35203		0 - Gateway
Length = 3, Unsigned	Node 1 in Alarm Down	15201				
Length = 3, Unsigned	Node 1 in Alarm Warning	15202				
Length = 8, Floating	Node 1 Threshold High Down				45200-45201	
Length = 8, Floating	Node 1 Threshold High Warning				45202-45203	
Length = 8, Floating	Node 1 Threshold Low Down				45204-45205	
Length = 8, Floating	Node 1 Threshold Low Warning				45206-45207	

Length = 4, Floating	Node 2 Value			35232-35233		
Length = 3, Unsigned	Node 2 State	15232				0 - Offline 1 - Online
Length = 4, Unsigned	Node 2 Type			35234		Please see section 6.1 for the sensor list
Length = 4, Unsigned	Node 2 Connection			35235		0 - Gateway
Length = 3, Unsigned	Node 2 in Alarm Down	15233				
Length = 3, Unsigned	Node 2 in Alarm Warning	15234				
Length = 8, Floating	Node 2 Threshold High Down				45232-45233	
Length = 8, Floating	Node 2 Threshold High Warning				45234-45235	
Length = 8, Floating	Node 2 Threshold Low Down				45236-45237	
Length = 8, Floating	Node 2 Threshold Low Warning				45238-45239	

Length and Type	Data Label	Status	Coils	Input Register	Holding Register	Notes:
Length = 4, Floating	Node 3 Value			35264-35265		
Length = 3, Unsigned	Node 3 State	15264				0 - Offline 1 - Online
Length = 4, Unsigned	Node 3 Type			35266		Please see section 6.1 for the sensor list
Length = 4, Unsigned	Node 3 Connection			35267		0 - Gateway
Length = 3, Unsigned	Node 3 in Alarm Down	15265				
Length = 3, Unsigned	Node 3 in Alarm Warning	15266				
Length = 8, Floating	Node 3 Threshold High Down				45264-45265	
Length = 8, Floating	Node 3 Threshold High Warning				45266-45267	
Length = 8, Floating	Node 3 Threshold Low Down				45268-45269	
Length = 8, Floating	Node 3 Threshold Low Warning				45270-45271	

Length = 4, Floating	Node 4 Value			35296-35297		
Length = 3, Unsigned	Node 4 State	15296				0 - Offline 1 - Online
Length = 4, Unsigned	Node 4 Type			35298		Please see section 6.1 for the sensor list
Length = 4, Unsigned	Node 4 Connection			35299		0 - Gateway
Length = 3, Unsigned	Node 4 in Alarm Down	15297				
Length = 3, Unsigned	Node 4 in Alarm Warning	15298				
Length = 8, Floating	Node 4 Threshold High Down				45296-45297	
Length = 8, Floating	Node 4 Threshold High Warning				45298-45299	
Length = 8, Floating	Node 4 Threshold Low Down				45300-45301	
Length = 8, Floating	Node 4 Threshold Low Warning				45302-45303	

Length and Type	Data Label	Status	Coils	Input Register	Holding Register	Notes:
Length = 4, Floating	Node 5 Value			35328-35329		
Length = 3, Unsigned	Node 5 State	15328				0 - Offline 1 - Online
Length = 4, Unsigned	Node 5 Type			35330		Please see section 6.1 for the sensor list
Length = 4, Unsigned	Node 5 Connection			35331		0 - Gateway
Length = 3, Unsigned	Node 5 in Alarm Down	15329				
Length = 3, Unsigned	Node 5 in Alarm Warning	15330				
Length = 8, Floating	Node 5 Threshold High Down				45328-45329	
Length = 8, Floating	Node 5 Threshold High Warning				45330-45331	
Length = 8, Floating	Node 5 Threshold Low Down				45332-45333	
Length = 8, Floating	Node 5 Threshold Low Warning				45334-45335	

Length = 4, Floating	Node 6 Value			35360-35361		
Length = 3, Unsigned	Node 6 State	15360				0 - Offline 1 - Online
Length = 4, Unsigned	Node 6 Type			35362		Please see section 6.1 for the sensor list
Length = 4, Unsigned	Node 6 Connection			35363		0 - Gateway
Length = 3, Unsigned	Node 6 in Alarm Down	15361				
Length = 3, Unsigned	Node 6 in Alarm Warning	15362				
Length = 8, Floating	Node 6 Threshold High Down				45360-45361	
Length = 8, Floating	Node 6 Threshold High Warning				45362-45363	
Length = 8, Floating	Node 6 Threshold Low Down				45364-45365	
Length = 8, Floating	Node 6 Threshold Low Warning				45366-45367	

Length and Type	Data Label	Status	Coils	Input Register	Holding Register	Notes:
Length = 4, Floating	Node 7 Value			35392-35393		
Length = 3, Unsigned	Node 7 State	15392				0 - Offline 1 - Online
Length = 4, Unsigned	Node 7 Type			35394		Please see section 6.1 for the sensor list
Length = 4, Unsigned	Node 7 Connection			35395		0 - Gateway
Length = 3, Unsigned	Node 7 in Alarm Down	15393				
Length = 3, Unsigned	Node 7 in Alarm Warning	15394				
Length = 8, Floating	Node 7 Threshold High Down				45392-35393	
Length = 8, Floating	Node 7 Threshold High Warning				45394-45395	
Length = 8, Floating	Node 7 Threshold Low Down				45396-45397	
Length = 8, Floating	Node 7 Threshold Low Warning				45398-45399	

Length = 4, Floating	Node 8 Value			35424-35425		
Length = 3, Unsigned	Node 8 State	15424				0 - Offline 1 - Online
Length = 4, Unsigned	Node 8 Type			35426		Please see section 6.1 for the sensor list

12 Extended Modbus Register List

In firmware 9.2, a new set of registers was added so that users can easily create template to map the Modbus registers efficiently. With the implementation of the new structure, every sensor is now allocated a Slave ID.

It's important to note that the Slave ID number is dynamically assigned based on which port the sensor is connected. Please note that Base Unit is always designated as Slave ID 1. Please see example below for reference.

For example, let's consider a scenario where there are four sensors connected to the expansion hub, each connected to different ports. In this case, the Slave ID number will be assigned according to the port to which each sensor is connected.

For instance, if Sensor #1 is connected to port 1 and Sensor #2 is connected to port 3, the Slave ID #2 will be assigned to the first sensor connected, in this case, Sensor #1. This dynamic assignment ensures efficient communication and management of multiple sensors within the system. The same rule applies for sensors connected directly to the Base Unit.

With the new structure, the register always begins at 8000 with an increment of 32.

For instance, on the image 2 on page 63 the Slave ID 3 is ENV-THUM, which comprises of 3 nodes: (1) Temperature, (2) Humidity, and (3) Dew point, and you wish to get the node value of dew point. To obtain its value, you would employ the following formula: = **8000 + (position node - 1) * 32**

Since the Dew point is 3rd node we will use it as the value for *position node*:

$$\begin{aligned}
 &= 8000 + (\text{position node} - 1) * 32 \\
 &= 8000 + (3 - 1) * 32 \\
 &= 8064
 \end{aligned}$$

So the node value of dew point is 8064.

Below is the sample table for the Extended Modbus Register list. Please note that the number of nodes will depend on the actual sensor and each node will always starts at **8000**.
